

Description

On one side adhesive polyethylene foil with Indian rubber glue.

Supply form

On one side adhesive foil wound in a roll. Colour: black

Dimensions

Thickness (µm)	100
Length in the roll (m)	100

Technical specification

Property	Value
Adhesion to steel	ca 1.7N/cm
UV resilience	max. 12 months
Application temperature	+10°C to +40°C
Temperature resilience	-30°C to +80°C
Storage life	6 months from date of manufacture
Storage temperature	+5°C to 25°C

Preparation

The substrate surfaces must be dry, degreased, free of dust, dirt and any loose particles. To clean the substrate surface, use product AA404. For sensitive surfaces we recommend that you test the application first.

Application

Unwind the required length of the tape from the roll and cut it off. Then apply it straight on the prepared substrate surfaces.

Important

Suitable substrate surfaces:

- PVC profiles and boards (e.g. window frames)
- Painted surfaces
- Surfaces finished with powder paint
- Steel: brushed/ ground
- Aluminium: highly polished/brushed/ground/anodised

ME513

Protective foil BLACK

illbruck ME513 Self-adhesive protective foil is designed for protection of substrates with sensitive finishing against damage and soiling during transport, assembly and installation.

Main advantages

- UV resilient for 12 months
- Fast, easy and aesthetic application
- For use in both interior and exterior
- Non-transparent and opaque

ME513

Protective foil BLACK

Service

The tremco illbruck Application Techniques Department is available to you any time at number 02203 57550-600.

Supplementary information

The information provided in this leaflet should be regarded as mere general guidelines za všeobecné pokyny.

Due to different application conditions over which we have no control, and due to a wide variety of materials, we recommend that, in order to verify the material's suitability, you carry out sufficient number of tests for the specific application.
